AI Product Manager

EXPERIENCE

Molot, AI Analyst (Freelance)

Jan – May 2026

- Dug into a food court's purchasing and operations: pulled the data into **Claude** and **Google Sheets** and found where money was leaking. By my estimate purchasing costs dropped about **18%**; they had no exact tracking.

Synergia University, Client Relations Coordinator

Aug 2023 – Apr 2025

- Ran **40+ client accounts** (onboarding, specs for the dev team, contracts). Plugged Claude and ChatGPT into document prep; response time fell about **a third**, and NPS on my projects went **from 62 to 78**.

IDF Lab (HSE University), Data Analyst

Jun 2023 – Nov 2024

- Did **RFM segmentation** of an external client's base, flagged the churn-risk groups and wrote up retention steps. Repeat-purchase retention rose roughly **15%** (estimated).

STARTUP EXPERIENCE

Yonma Yon, Product Manager / Co-founder

Nov 2024 – 2025

- Ran **10+ user interviews**, pushed the insights through NotebookLM and boiled it down to **3 scenarios** worth building into the MVP.
- Built the **MVP** myself (landing + Telegram bot) to test demand before spending on development. **150+ users** came in the first months.
- Set up Voiceflow and n8n agents to handle incoming requests so I wasn't sorting them by hand. That opened the first **B2B inquiries** for analytics.

Instameal, Product Manager / Co-founder

Mar – Jul 2024

- Launched from zero, from customer discovery to first paying users: about **400 users** at roughly **40% conversion** (our own estimate, no BI in place).
- Built the MVP by vibe coding (Telegram bot + site) and drew the UX in Figma, with no developers hired.
- Kept a **team of 8** (logistics, development, marketing) running on Scrum.

PROJECTS

AI Career System

2026

- Built a system that job-hunts for me: it parses a vacancy, fits the resume to ATS and writes the cover letter. Vacancy to letter in **under 80 seconds**. Claude API, n8n, Google Sheets and Telegram under the hood.

Mia, Dental Clinic RAG Assistant

2026

- Built an assistant that answers patients strictly from the clinic's own documents and **doesn't make things up**: RAG on Python, Groq API and Gradio. Runs **24/7** on Hugging Face.

Expat Roadmap SEA

2026

- Built an expat platform solo on **Next.js + Supabase**: visa/city map, housing, events and jobs across **10+ countries**. Main entry point is a Telegram bot.

Portfolio + JasurGPT

2026

- Built my own site with a chatbot, **JasurGPT** (OpenRouter), trained on my resume and projects; it answers recruiters for me **around the clock**.

SKILLS

Product: discovery, customer dev, CJM, user stories, prioritization, hypotheses, A/B, MVP, Scrum, NPS, LTV, CAC, funnels

AI & Automation: Claude, ChatGPT, prompt engineering, RAG, n8n, Voiceflow, NotebookLM, Cursor, AI agents

Dev (vibe coding) & Tools: Next.js, React, TypeScript, Supabase, Vercel, Git; Google Sheets, Figma, Telegram Bot API, Whisper

CONTENT

- **@pmvision_ai**, a Telegram channel on AI, product and the job search in real time. Dzen: **67% read-through**; Threads: about **15,000 views** per thread.

EDUCATION

- **HSE University**, Moscow: Business & Economics, International Program (**did not finish**, 2025). Courses: AI for PM (DeepLearning.AI), CJM & CustDev (ProductStar), Metrics & Models (Shelf).
